

MESSAGE

Development of standards and documentation of best practices have been useful in reducing inventory and cost in industry. It has also provided guidance to engineers in selection, procurement, repair of equipment etc.

IPSS Standards have been formulated by various committees consisting of experts from Steel Plants and consultants for steel industries across India. This Handbook has been compiled after incorporating all recently prepared standards. To reap the maximum benefits out of these standards, the first step is to make this information available online to all concerned and provide knowledge about existence of these standards in different areas.

I convey my appreciation to IPSS Secretariat whose efforts have resulted in bringing about this useful compilation and hope that this Handbook will serve as an important reference document for the plants in taking decisions for achieving the desired results.
